## INTERNATIONAL SEARCH REPORT

International application No.  
PCT/IN 2003/000336-0

Generally, a polymorphic form should be characterised by elemental analysis and NMR to demonstrate purity and further by X-Ray-, IR- or DSC-data to substantiate that it is a new modification. In any case the method, how the characterisation has been carried out, has to be described. Although this is not the case in the present application, the search has been carried out on the basis of the wording of the present claims.
